AI Digital Workers & AI Agents Capabilities in Mortgage Loan Manufacturing

## POS Assistant Role Breakdown: Human required on ~15% - 30% of work

| Task Category                      | Handled by AI Agent | Requires Human Oversight | Notes  |
|------------------------------------|---------------------|--------------------------|--|
| 1003 Application Guidance          |                     | $\otimes$                | Al walks borrower through form completion, explains fields                   |
| Product Eligibility Q&A            |                     | <b>A</b>                 | Al handles basic questions; edge cases may need a loan officer               |
| Document Upload Assistance         |                     | $\otimes$                | AI explains requirements and checks for completeness                         |
| Real-Time Pre-Qualification Checks |                     | <b>A</b>                 | AI can run soft credit pull and DTI calcs, but doesn't issue final approval  |
| FAQs (Rates, Loan Types, Timeline) |                     | $\otimes$                | NLP-powered AI agents can handle a wide range of standard borrower questions |
| Chat/Voice Communication           |                     | <b>A</b>                 | Al handles most inquiries; escalates complex or emotional conversations      |
| Borrower Nudges & Follow-Ups       |                     | $\otimes$                | AI sends reminders for missing docs or signatures                            |
| Escalation to Human Loan Officer   |                     |                          | Al triages and routes high-touch borrowers to humans                         |

Loan Set Up Role Breakdown: Human required on ~10% of work

| Task Category                          | Handled by AI Digital Worker | Requires Human Oversight | Notes  |
|--|------------------------------|--------------------------|--|
| Document Intake & File Creation        |                              | $\otimes$                | AI pulls in initial borrower docs and creates file in LOS                  |
| Document Classification & Indexing     |                              | $\otimes$                | Uses OCR/NLP to identify, label, and organize docs (W-2s, IDs, bank stmts) |
| Data Entry into LOS                    |                              | <b>A</b>                 | Extracted data is auto-populated into LOS fields                           |
| Service Ordering (Credit, Flood, VOE)  |                              | $\otimes$                | Al initiates orders based on checklist requirements                        |
| Loan Number Assignment & File Stamping |                              | $\otimes$                | Standard workflow automation step  |
| Status Update & Task Routing           |                              | <b>A</b>                 | Al sets initial loan milestone and routes tasks to processor/underwriter   |
| Exception or Missing Doc Escalation    |                              |                          | Al flags issues, but human may validate if truly missing or misfiled       |
| System & Vendor Integrations           |                              | <b>A</b>                 | Al automates actions once integrations are in place                        |

Loan Processor Role Breakdown: Human required on ~15% of work

| Task Category                       | Handled by AI Digital Worker | <b>Requires Human Oversight</b> | Notes   |
|-------------------------------------|------------------------------|---------------------------------|---|
| Document Collection                 |                              | $\otimes$                       | AI can request/upload docs via borrower portal or smart email/chat          |
| Document Classification & Indexing  |                              | $\otimes$                       | OCR/NLP can identify W-2s, paystubs, bank statements, etc.                  |
| Data Extraction from Docs           |                              | $\otimes$                       | Income, asset, and ID info pulled into LOS fields automatically             |
| Standard Condition Review           |                              | $\otimes$                       | Verifies receipt and validity of typical docs (VOE, bank letters)           |
| Income Calculation (W-2/Salaried)   |                              | $\otimes$                       | Automatable via templates and pre-set logic                                 |
| Communication with Borrower         |                              | <b>A</b>                        | AI can handle routine follow-ups; edge questions may need humans            |
| Self-Employed Income Analysis       | $\otimes$                    |                                 | Complex tax returns, add-backs, and interpretation still manual             |
| Conflicting Document Resolution     | $\otimes$                    |                                 | When data doesn't match (e.g., deposits vs. stated income)                  |
| Exception/Edge Case Escalation      | $\otimes$                    |                                 | AI flags unusual items for processor or underwriter                         |
| LOS Workflow Management             |                              | <b>A</b>                        | AI can track milestones and statuses, but exceptions need manual adjustment |
| Investor Overlay Interpretation     | <b>A</b>                     |                                 | Requires subjective judgment, varies by investor/product                    |
| Final Packaging Before Underwriting |                              | $\otimes$                       | AI can bundle and prep clean files for underwriter review                   |

## THOUGHTFOCUS BUILD

Force Multipliers, Built at the Agent Factory

AI Digital Workers & AI Agents Capabilities in Mortgage Loan Manufacturing

## Jr. Underwriter Role Breakdown: Human required on ~15% - 25% of work

| Task Category                        | Handled by AI Digital Worker | Requires Human Oversight | Notes  |
|--------------------------------------|------------------------------|--------------------------|--|
| AUS Submission (DU/LP)               |                              | $\otimes$                | Automated based on LOS data inputs                         |
| Pre-underwriting Checklist           |                              | $\otimes$                | AI checks completeness and data quality                    |
| Income Calculation (W-2)             |                              | $\otimes$                | Structured income easily calculated via templates          |
| Asset and Reserve Review             |                              | $\otimes$                | Verifies funds to close, reserve sufficiency               |
| Debt-to-Income (DTI) Calculation     |                              | $\otimes$                | Real-time DTI from income and liabilities                  |
| Investor Guidelines Matching         | <b>A</b>                     |                          | Needs human for nuanced investor overlays                  |
| Manual Review of Edge Docs           | $\otimes$                    |                          | Irregular documents (e.g., gift letters, handwritten docs) |
| Complex Income (Self-employed, 1099) | <b>A</b>                     |                          | Requires interpretation of tax returns                     |
| Escalation/Exception Flagging        |                              | <b>A</b>                 | AI flags files for Senior Underwriter when needed          |

Sr. Underwriter Role Breakdown: Human required on ~50% - 70% of work

| Task Category                     | Handled by AI Agent | Requires Human Oversight | Notes   |
|-----------------------------------|---------------------|--------------------------|---|
| Final Risk Decision               | $\otimes$           |                          | Human makes credit decision                                       |
| Complex Income Evaluation         | <b>A</b>            |                          | Requires professional judgment, tax return analysis               |
| Investor/Agency Overlay Judgment  | <b>A</b>            |                          | AI can flag but not apply nuanced rules                           |
| Exceptions & Edge Case Resolution | $\otimes$           |                          | Discretion required   |
| Review of AI Flags & Conditions   |                     |                          | AI flags; human validates   |
| Compliance and Eligibility Checks |                     | <b>A</b>                 | AI reviews for QM, TRID, ECOA, etc. — human reviews complex cases |
| Communication with Loan Officer*  |                     |                          | AI can *assist with notes, but humans handle final communication  |

Closing Prep Role Breakdown: Human required on ~15% - 30% of work

| Task Category                        | Handled by AI Digital Worker | Requires Human Oversight | Notes   |
|--------------------------------------|------------------------------|--------------------------|---|
| Verify All Prior-to-Close Conditions |                              | $\otimes$                | Auto-checks completion of outstanding conditions                    |
| Closing Disclosure (CD) vs. LE Match |                              | <b>A</b>                 | AI highlights discrepancies; human confirms if exceptions are valid |
| Final AUS & Data Sync Check          |                              | $\otimes$                | AI runs updated AUS and syncs data                                  |
| Fee Review (Tolerance Check)         |                              | <b>A</b>                 | AI flags tolerance violations                                       |
| Generate Closing Package             |                              | $\otimes$                | Automatically pulls docs and assembles packages                     |
| Escalation of Out-of-Tolerance Fees  | $\otimes$                    |                          | Human must approve fee cures or revised CD                          |

QC/Post Close Role Breakdown: Human required on ~5% - 15% of work

| Task Category                      | Handled by AI Digital Worker | <b>Requires Human Oversight</b> | Notes   |
|------------------------------------|------------------------------|---------------------------------|---|
| Document Matching (LOS vs. Source) |                              | $\otimes$                       | AI compares values (income, fees, disclosures)            |
| Compliance Rule Audits             |                              | $\otimes$                       | TRID, ECOA, RESPA checks done programmatically            |
| Fraud & Red Flag Detection         |                              | <b>A</b>                        | AI flags; humans investigate                              |
| Audit Report Generation            |                              | $\otimes$                       | Prepares full audit trail for QA, legal, and investor use |
| Cure Workflow Assignment           |                              | $\otimes$                       | Automatically routes failed checks for remediation        |
| Final Sign-off & Escalation Review | 0                            |                                 | Auditor signs off and explains any failures               |
